

# Web portfolio: Synopsis

The web portfolio serves as a comprehensive resume and digital showcase, presenting my professional journey, skills, and accomplishments.

- Target Audience:

The primary audience includes potential employers, clients, collaborators, and anyone interested in my professional background. Age and background may vary, but the focus is on individuals seeking a deeper understanding of your skills and experiences.

- Developers

The web portfolio is developed by Nishab Rupakheti, ensuring a personalized touch and direct representation of your skills in web development.

- Size and Hierarchy:

The site follows a hierarchy structure, featuring distinct sections for a home page, skills, hobbies, and portfolio. Each section is strategically organized to provide a seamless and intuitive user experience.

- Technical Environment:

The web portfolio is hosted on the Labranet server of JAMK University, leveraging a technical stack comprising HTML, CSS, and a touch of JavaScript for added interactivity. This combination ensures optimal performance and accessibility. The design prioritizes a smooth and responsive interface, allowing seamless navigation and adaptability across devices. By embracing simplicity and aligning with JAMK University's server, the portfolio aims to deliver an efficient and user-friendly experience to visitors.

- Layout/User Interface:

The layout emphasizes a clean and modern design, utilizing a balanced color scheme to enhance readability. The user interface is intuitive, guiding visitors

through the portfolio with ease. Interactive elements, such as hover effects and awesome icons, engage the audience.

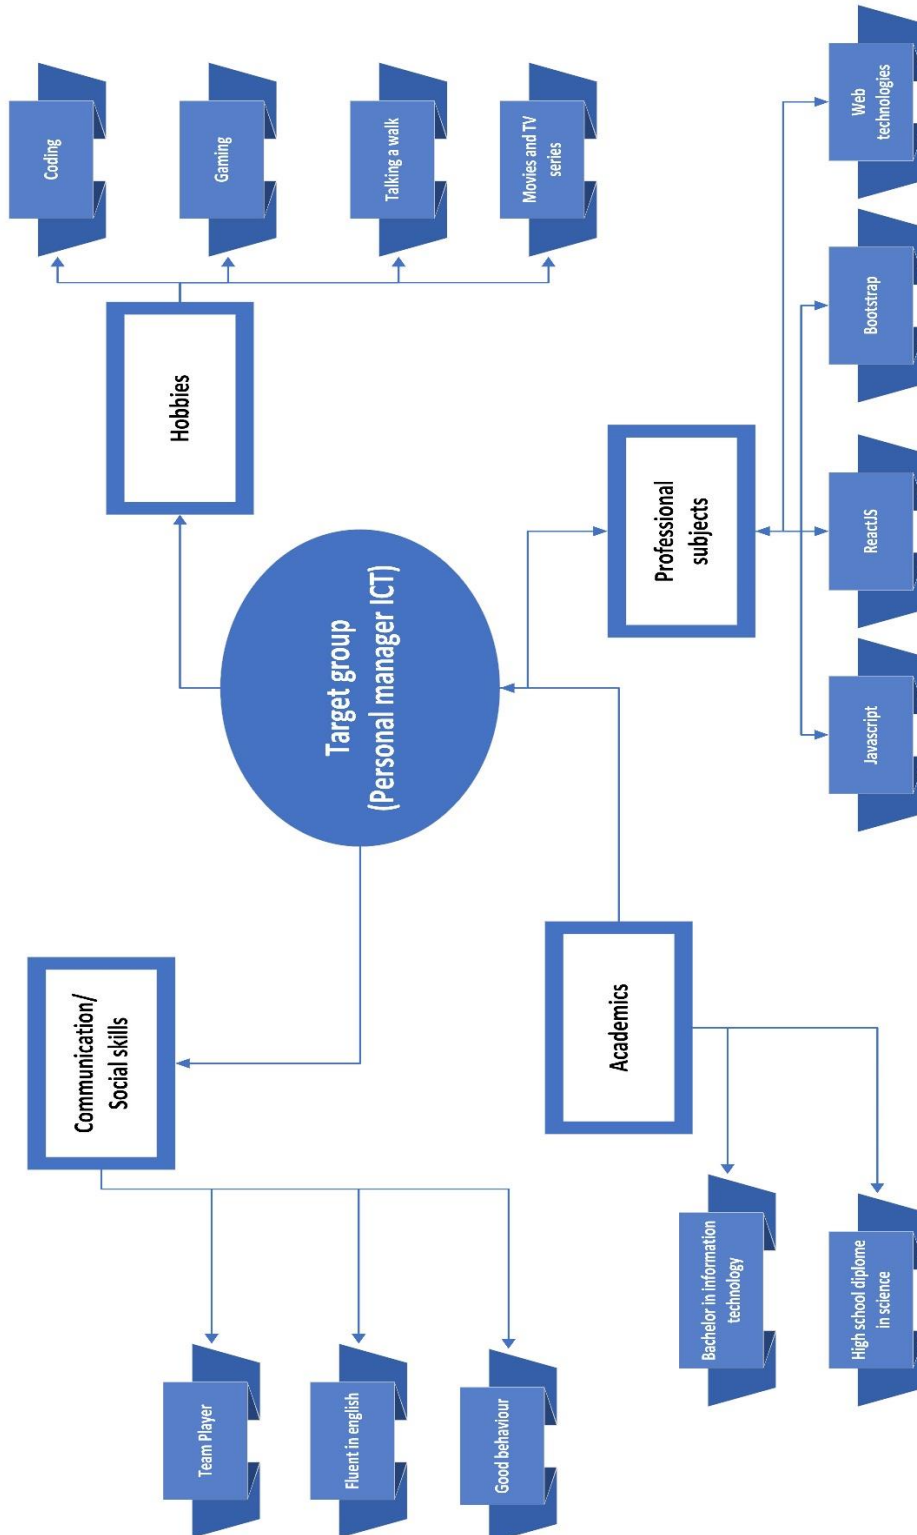

- **Maintenance/Update Policy:**

Regular updates are scheduled to keep the portfolio current. A annually update policy in the spring ensures that recent achievements, projects, and skills are prominently featured.

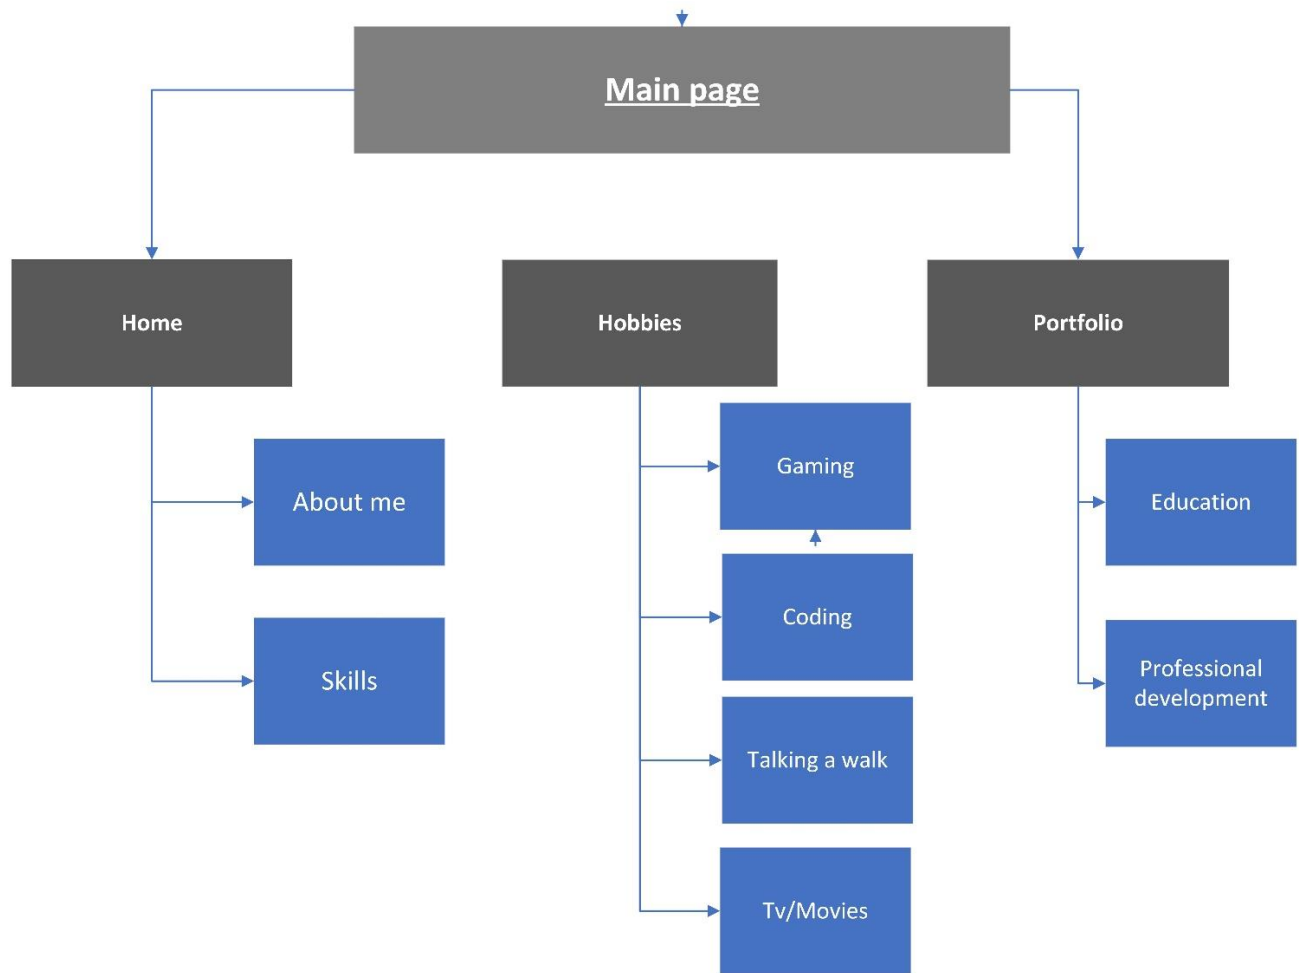

- **Copyright Issues:**

Strict adherence to copyright regulations is maintained. All content featured on the portfolio is either original or used with the proper permissions and attributions.

# Result of testing and Validation

The website was tested in the Chrome and Microsoft edge browsers and there seems to be no difference between them.

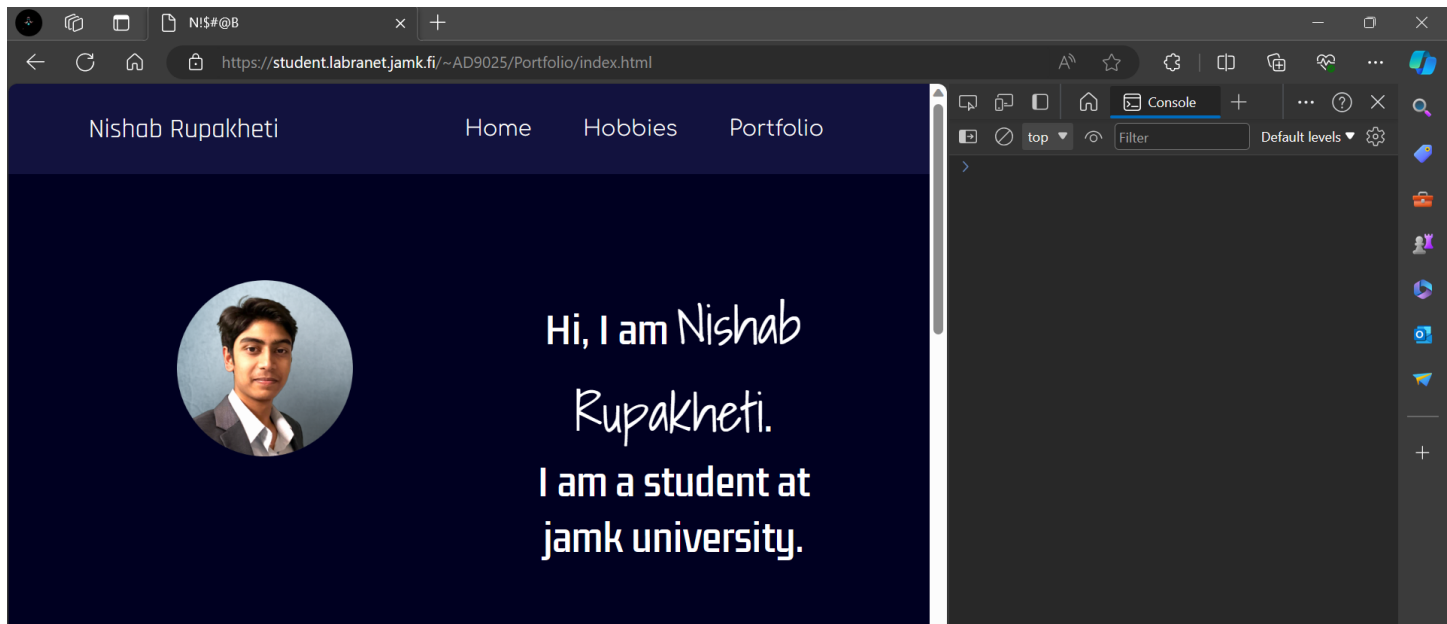

Figure 1: Edge browser and its console

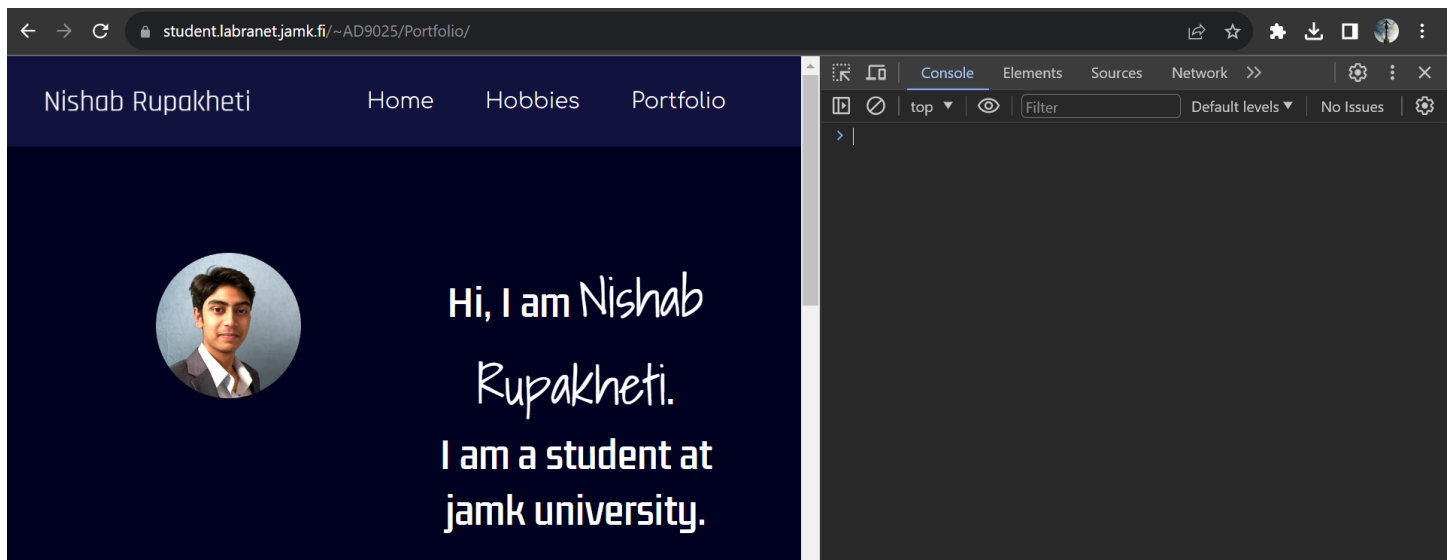

Figure 2: Chrome and its console

As per the figure there seems to be no issue in both browsers and website works perfectly fine.

## **Resources and hours allotted in this web portfolio.**

- General Planning:

Defined goals and identified the target audience. Took me around 25 minutes.

- Designing Wireframe:

Created and iterated on the wireframe. Took me around 40 minutes.

- Layout Design:

Developed the basic layout and optimized for responsiveness. Took me around 2.5 hours.

- Development with HTML, CSS, and little bit of JavaScript.

Coded, styled, and added some interactivity with js took me around 3 hours.

- Testing

Cross browser testing, debugging took me around 45 minutes.
